Iris & Facial Recognition

iT100 Time Clock for the Modern Workforce

VCS offers iT100 iris and facial recognition time clocks, a best of breed authentication process available today. Iris recognition simply involves taking a picture of the iris to provide identity authentication without PIN numbers, passwords or cards. It's the most accurate of the commonly used biometric technologies and an ideal touchless data collection solution for your employees during the pandemic and beyond.

iT100 time clocks integrate with VCS workforce management software to increase accuracy, speed and eliminate buddy punching at the time clock.

HOW IT WORKS

INTERACTIVE MODE

VCS In this setting, the employee who is punching in or out first scans their iris or face. If the iT100 recognizes the employee, a screen shows up with two options: punch in or punch out. As soon as the employee selects one of these buttons, the iT100 sends that information to your VCS platform in real-time, storing the punch record in our system instantly. Employees also receive a text message and/or a push notification notifying them about their punch activity.

CONTINUOUS MODE

In this setting, the iT100 is always ready to scan for iris/face, and the moment the camera detects and recognizes an employee, it sends that information directly to your VCS platform. Our algorithm then processes it by running through several checks in order to determine whether it was a punch in or a punch out, and then stores that information accordingly. Employees also receive a text message and/or a push notification notifying them about their punch activity.

ADVANTAGES

Most accurate of the commonly used biometric technologies

Hands-free technology to keep your workforce safe

Identity authentication without PIN numbers, passwords or cards

100% protection against buddy punching

Saves time & eliminates common manual errors

Syncs data in real-time for instant access to key reports

Allows employees to view & track hours worked

Calculates & converts hours directly to your payroll provider
